

# The National Space Centre

The National Space Centre is home to NSC creative, suppliers of CG animation and visual effects for all formats.

The creative team consists of producers, directors, CG artists, graphic designers, scriptwriters, composers and musicians. The output is focused on CG large format immersive experiences including Fulldome and 3D stereoscopic motion platform rides. The team also has experience in TV broadcast, exhibition design and corporate events.

The National Space Centre is a world leader in Fulldome production with over 8 years experience producing high-quality digital planetarium shows. The team have won recognition for innovation in the area of Fulldome and have a library of films which are licensed around the world in over 16 different countries.

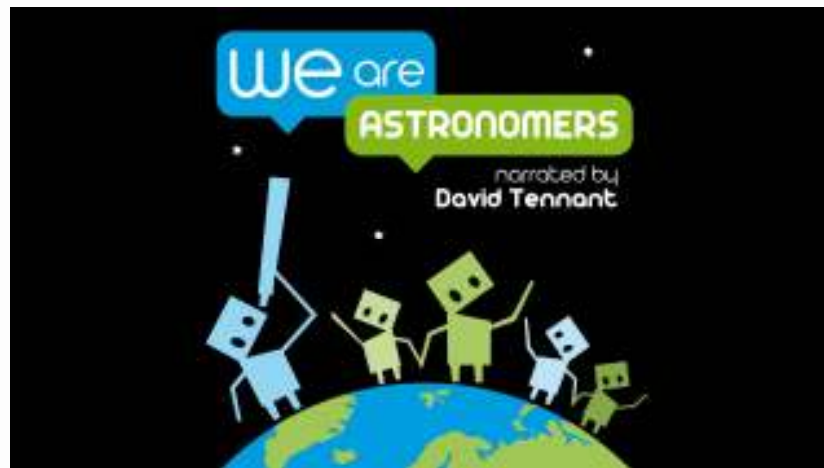

What makes us different from other content creators is not just the diversity of skills and talent under one roof, but also the understanding we have of science centres and similar attractions and, most importantly, of their public and schools audience. Every production is supported by our in-house science and education advisors.

# The National Space Centre

Show number ten has just been completed and it is to celebrate the International Year of Astronomy with a UK nationwide launch in. "We Are Astronomers" is a collaboration with 7 UK science centres and aims to highlight the role of the modern day astronomer to the scientists of tomorrow.

Other recent works include producing content for the Next Generation Challenger Learning Centre experience and the very popular *Mission Europa 3D*, a stereoscopic motion platform ride. 2008 saw the completion of *Stars* a high end Fulldome show to launch the brand new state-of-the-art Sudekum Planetarium, commissioned by the Adventure Science Centre, Nashville, TN.

Our aim is to create transformative experiences that educate, entertain and are above all, unique. Creating shows that cater for an audience age group that ranges from five to ninety is one of the most challenging aspects of production, and an area in which we have eight years worth of experience.

We have excellent working relationships with industry leading technology vendors with both Skyskan and E&S Spitz worldwide distributors for our shows.
